

Description

The creative workshop “the labyrinth garden” guides students from observing nature to designing and creating a ceramic artwork to be integrated into the school environment.

By working with clay, participants transform natural elements into a ceramic labyrinth destined for the school garden. Each stage of the process encourages planning, step-by-step development and the ability to review and improve one's work.

Methodology

The workshop unfolds through progressive stages: nature observation, design, clay modelling, firing and glazing.

Objectives

- Stimulate creative thinking and hands-on creativity.
- Develop planning and revision skills.
- Increase environmental awareness and ecological sensitivity.
- Encourage collaboration and teamwork.
