

Description

The “Green jobs and the energy transition” workshop provides students with an opportunity to explore the opportunities offered by sustainable development.

Through discussions with professionals from leading Italian industries, students will learn from people who face the challenges of major global changes every day and develop technological solutions for decarbonization, the circular economy and digital transformation.

Methodology

The programme is based on active learning through role-playing activities, project work and problem-solving simulations. Collaboration with companies and associations also allows students to engage with real-world experiences and practical case studies.

Objectives

- Introduce students to STEM subjects and the engineering sector.
- Develop transferable skills such as problem-solving, teamwork and communication.
- Increase awareness of energy-related challenges.
- Promote gender equality in scientific and technical careers.
